

Sample Test Report

Synthetic completed-test evidence demonstrating traceability, acceptance and cost visibility.

Report identification

Programme	VP-ALPHA / Project Falcon
Test leg	LEG-004 - Thermal Cycling
Method	ENV-TC-004 Rev C
DUTs	A001-A020
Equipment	TC-02
Operator	Sarah Kim
Execution	2026-08-18 08:00 - 2026-08-22 14:00
Specification	SPEC-001 Rev C

Result summary

Parameter	Criterion	Result	Status
Functional output	Within released electrical limits	20/20 within limits	PASS
Thermal cycles	1,000 cycles, -40 C to +150 C	1,000 completed	PASS
Post-test leakage	<= 1.50 mA	Max 1.12 mA	PASS
Visual inspection	No package cracking	No defects	PASS

Deviations / issues

One chamber recovery alarm occurred during cycle 612. The interruption was within the method-defined dwell recovery allowance and did not invalidate the test. Event retained in lessons-learned history as a test-execution issue.

Traceability

Result -> DUT -> test leg -> programme -> validation requirement -> method revision -> equipment -> calibration certificate -> operator qualification -> evidence.

Cost summary

Labour	Equipment	Consumables	Overhead	Total
EUR 1,140	EUR 3,264	EUR 260	EUR 560	EUR 5,224

Approval note

This is a synthetic demonstration report. The browser-only prototype does not provide validated electronic signatures.
