

Test Programme Template

Example operational template for building and releasing a validation programme.

Document control

Programme ID	VP-TEMPLATE-001
Project / Product	Project name / product & revision
Owner	Validation Engineer
Gate	Draft -> Review -> Released
Required completion	YYYY-MM-DD
Budget	EUR 25,000
Specification basis	Controlled product / validation specification

1. Validation objective

Define the validation claim, source requirements, DUT population, priority, completion target, constraints and evidence expectations before laboratory release.

2. Proposed test sequence

Seq	Test method	State	DUTs	Staff policy	Predecessor	Est. cost
1	ELEC-FUNC-001 Rev D	Released	12	Auto	-	EUR 1,450
2	ENV-TC-004 Rev C	Released	12	Preferred	1	EUR 4,920
3	NEW-XXX	Development required	12	Required	2	EUR 9,650
4	ELEC-FUNC-001 Rev D	Released	Survivors	Auto	3	EUR 1,450

3. Readiness gates

Gate	Acceptance
Requirements	All validation requirements linked to one or more test legs
Specification	Released test specification with unambiguous limits and sample definition
Method	Released method, or approved development task with projected release
Samples	Confirmed sample-ready date and genealogy
People	Independent qualification valid through attended work
Equipment	Capability, capacity and calibration valid through planned execution
Cost	Budget approved; forecast-at-completion visible
Planning	No hard resource conflicts; predecessor logic respected

4. Change control

Record project-level priority, due-date, sample-availability and staffing changes with a reason. Recalculate the common laboratory plan so displacement of other programmes remains visible.
